

WHY GREAT ESCAPE LAZER RUNNER?

LIGHT WEIGHT COMFORTABLE VESTS

The advanced fiber-optic sensors in our Battle Vests are durable, spectacular, functional and visually stunning (they glow brilliantly in the dark – we program the colors). The fact that fiber-optic sensors are "as light as a feather" makes for a light weight and comfortable vest.

AUTOMATIC REACTIVATION WHEN TARGETED

Old style infrared laser tag systems require a player to run and find a reactivation or download station every time he is targeted by another player. Our LaZer Runner uses advanced, wireless radio frequency technology. When a LaZer Runner player is targeted, he is deactivated for a short period of time. His phaser and vest is then reactivated automatically without the need to find a reactivation station.

WE PLAY DIFFERENT

Individual or Team play with many different types of play is available. Players must always be on guard for Sentry Pods within the arena. These pods deactivate any player in range unless the player is quick enough to disarm it with his phaser. Sentry Pods automatically detect and warn players to evacuate the area prior to counting down and deactivating the intruder.

When a player is deactivated, not only does his vest shut down for a short time, not only do his fiber-optic sensors go dark, not only does the sound chip give him an audible reminder that he is deactivated, but the vibrating hit sensor lets him "feel" the exhilarating action throughout the game. The vibrating hit sensors are built in to every Battle Vest. Individual player's scores are updated instantly right on the display on their phasers. The Battle Vests are programmable, allowing you to make up your own teams. Many different games are available.

TWO STAGE LASER TARGETING BEAM

This is a very, very cool feature! Pull the trigger on your phaser half way and you will discover a continuous laser beam emanating from the phaser. Use it for aiming. The beam stays "lit" in this trigger position. When you're ready, pull the trigger all the way back to score a hit.

The LaZer Runner phaser will let you know when someone has you locked in their sights! The sound chip will automatically emit a very distinctive sound to ensure that you know that you had better take evasive action right now!

VOICE SYNTHESIZED COMMANDS

Futuristic voices and sounds are in every Battle Phaser, Home Base, and Sentry Pod to prompt players throughout the game and set the stage for an unparalleled experience!

CHANGE THE LEVEL OF CHALLENGE

Sometimes you need a challenging game for your hard-core laser tag players and an easy game for smaller kids or less familiar players. No problem! LaZer Runner offers handicapping capabilities to "level the playing field". We can make the game easy for little kids and more challenging for the regulars.

HANDICAPPED ACCESSIBLE

Our Lazer Runner Arena is designed to accommodate standard wheelchairs and is handicap accessible.

OUR SCORECARDS

Our brilliant, easy to read 'Mission Analysis' scorecards display player statistic, showing your statistics as well as how you rank with the other players from your group.

Great Escape – 20 Mar, 2014 1:59
